

RICHMOND RIVERFRONT PLAN

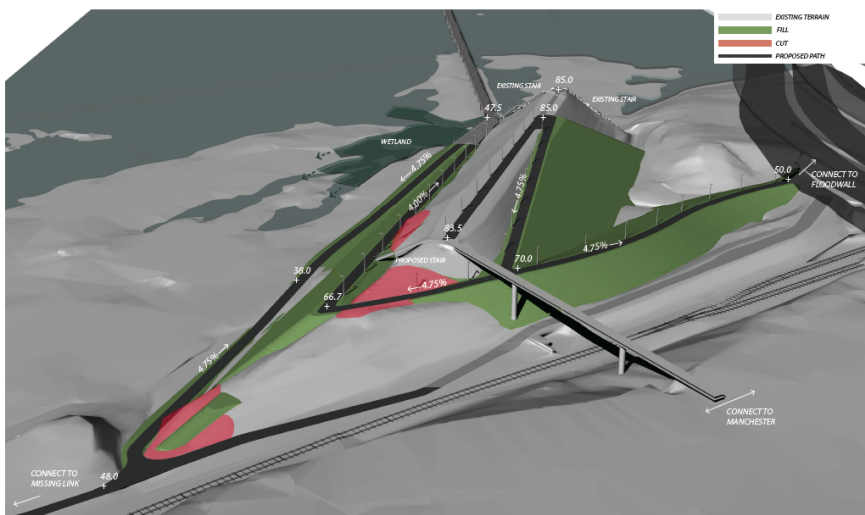

Implementation Public Forum: Brown's Island Dam Walk

Tuesday,
February 18, 2014
7:00 PM

VA War Memorial
621 S. Belvidere St.

As a first step in the implementation of the Richmond Riverfront Plan, the Brown's Island Dam Walk will transform an industrial era structure into a key connection between both banks of the James River at the center of Richmond's Riverfront. The BIDW will expand the Riverfront circulation networks -- a series of connections providing access along, across, and around the river -- to serve a diverse group of users -- including persons with disabilities, cyclists, pedestrians, and runners -- in their pursuit of alternative transportation, fitness, and the spectacular natural beauty of the Riverfront. The project models ecologically-sensitive and sustainable trail development by minimizing runoff, removing invasive species, and extensively re-planting slopes with native species to result in a diverse array of new or enhanced habitats for the rich flora and fauna of the Riverfront.

The **Department of Planning & Development Review** is hosting this forum which will include a concise overview of the Riverfront Plan, presentation of the schematic BIDW design, and questions and comments from the public.

Questions and comments should be directed to:

T. Tyler Potterfield, Project Manager
